VEMS User Manual

RSC Vehicle Management System

Edition of 2026-10-29

A step-by-step guide to the RSC Vehicle Management System (VEMS): requesting and running trips, managing the fleet, and administering users. It is written for the people who use the app every day, not for developers.

How to use this manual: find your role in the table below and read the sections listed for it. Everyone should read **Part 1**.

Your role	What you do in VEMS	Read
Employee	Request trips, follow your trips, give feedback, record your attendance	Part 1, Part 2
Department Head	Everything an employee does, plus approve or reject your department's trip requests	Part 1, Part 2, Part 3
Driver	Run the trips assigned to your vehicle, check passengers in and out	Part 1, Part 4
Transport Manager (Logistics)	Approve trips, assign vehicles, run the fleet (vehicles, drivers, vendors, routes, factories), handle complaints, read reports	Part 1, Part 2, Part 5, Part 6
Management	View all trips, the fleet, complaints and reports (read only)	Part 1, Part 2, Part 6
Admin / Super Admin	Everything above, plus users, departments, zones, roles and settings	All parts

> **You only see what you are allowed to use.** The menu on the left shows only the pages your role can open, and buttons such as "Create", "Edit" or "Delete" appear only if you may use them. If something in this manual is missing from your screen, ask your administrator; it is a permission setting, not a fault.

Contents

- Part 1 — Getting started (everyone)
- Part 2 — Trips, feedback and attendance (employees)
- Part 3 — Approving trips (department heads)
- Part 4 — Driving trips (drivers)
- Part 5 — Running transport (transport managers)
- Part 6 — Reports
- Part 7 — Administration (admins)
- Part 8 — Reference

Part 1 — Getting started (everyone)

1.1 Getting an account

There is no "Sign up" page. An administrator creates your account and tells you your **username** (or email) and **password**. If you don't have one, ask your administrator.

1.2 Logging in

1. Open the VEMS address in your browser.
2. On **"Log in to your account"**, enter your **"Username or Email"**. Either works.
3. Enter your **"Password"**.
4. Tick **"Remember me"** if this is your own computer.
5. Click **"Log in"**.

If you see **"These credentials do not match our records."**, check the username and password and try again. After 5 wrong attempts, logging in is blocked for a short while; wait a minute and try again.

1.3 Forgot your password

This only works if your account has an email address.

1. On the login page, click **"Forgot password?"**.
2. Enter your **"Email address"** and click **"Email password reset link"**.
3. Open the email and click the link.
4. Enter your **"Email"**, a new **"Password"** and **"Confirm password"**, then click **"Reset password"**.
5. Log in with the new password.

If your account has **no email address**, or the email doesn't arrive, ask your administrator to set a new password for you (see 7.1).

1.4 "Verify email" page

If you see a **"Verify email"** page instead of the app, VEMS needs you to confirm your email address (this happens after an email address is added or changed). Open the email VEMS sent you and click the link. If it didn't arrive, click **"Resend verification email"**.

1.5 Your settings (name, email, password, theme)

1. Click your name at the bottom of the left menu (or your avatar at the top right).
2. Click **"Settings"**.
3. Choose a page on the left: - **"Profile"**: change your **"Name"** and **"Email address"** (optional), then click **"Save"**. (A new email address must be verified.) - **"Password"**: enter your **"Current password"**, a **"New password"** and **"Confirm password"**, then click **"Save password"**. - **"Appearance"**: choose **"Light"**, **"Dark"** or **"System"**.

Other details (phone numbers, department, zone, role, status) can only be changed by an administrator.

To log out, click your name and choose **"Log out"**.

1.6 Finding your way around

- **Left menu:** grouped into **Overview**, **Operations**, **Fleet**, **Reports** and **Administration**. Click the toggle at the top left to shrink it to icons.
- **Top bar, from right to left:** your avatar menu, the light/dark theme switch, the **notification bell**, and (if you work in more than one zone) the **zone switcher**.
- **Breadcrumbs** at the top left show where you are; click one to go back.

Zones (offices)

VEMS is split into **zones**, such as Dhaka (DHK) and Chattogram (CTG). Vehicles, drivers, vendors, routes, factories and users each belong to a zone.

- If you have access to **specific zones**, you only see records in those zones.
- If you have access to **all zones**, you see everything.
- If you have access to **two or more zones**, a **zone switcher** appears in the top bar. Click it and choose a zone under **"Viewing zone"** to narrow every list to that zone, or choose **"All Zones"** to see all of *your* zones again. This only changes what you are looking at; it never gives you access to more.

1.7 The notification bell

The bell in the top bar shows a red number when you have unread notifications. VEMS sends notifications **in the app only** (not by email or SMS), and never notifies you about something you did yourself.

1. Click the bell to see your latest 10 notifications. Unread ones are highlighted.
2. Click a notification to open the trip, complaint, vehicle or driver it is about.
3. Click **"Mark all read"** to clear the red number.

See 8.2 for the full list of notifications.

1.8 Working with lists (tables)

Most pages show a table with the same controls:

- **Search box:** type and wait a moment; the list updates on its own. Click the **X** to clear it.
- **"Filters"** button: opens **"Filter Options"**. Pick one or more values per filter. Active filters appear under **"Active Filters:"**; click **"Clear all"** to remove them.
- **Sorting:** click a column heading. Click again to reverse the order.
- **Pages:** at the bottom, choose **"Show 10 / 20 / 50 / 100 per page"** and use the page buttons.
- **Row icons:** hover over an icon to see what it does (for example "View vehicle", "Edit vehicle").
- **"Export"** (on some lists): choose **"CSV File"**, **"Excel File"** or **"PDF Report"**. The export uses your current search and filters.

1.9 Messages and confirmations

- After you save something, a message appears at the top right: **green** for success, **red** for an error, **amber** for a warning. It closes by itself after a few seconds, or click the X.

- Before anything is deleted, VEMS asks **"Please confirm"**. Click **"Delete"** to go ahead or **"Cancel"** to stop.
- **"Server error. Please try again, or contact support if it keeps happening."** means something went wrong on the server. Try again once; if it repeats, tell your administrator what you were doing and when.

1.10 Your dashboard

Dashboard (top of the left menu) is the first page after logging in. What it shows depends on your role:

- **Employees and department heads:** **"My Dashboard"** with your attendance card, the buttons **"Request a Trip"** and **"Submit Feedback/Complaint"**, **"My Trips"** (pending approval, upcoming, in progress, and your next trips) and **"My Complaints"**.
- **Drivers:** **"My Dashboard"** with your attendance card, a warning if your driving licence is missing, expiring or expired, **"Today's Trips"** (trips assigned to your vehicle today and upcoming), and **"My Complaints"**.
- **Transport managers, management and admins:** **"Status At A Glance"**, with summary cards for vehicles, drivers, routes, trips, complaints and document alerts, charts, **"Upcoming Schedules"** and **"Active Issues & Complaints"**. These figures can be up to 5 minutes old.

Part 2 — Trips, feedback and attendance (employees)

2.1 How a trip works

```
You request        Approver          Logistics         Driver            Driver
the trip     →     approves it   →   assigns a    →   starts it    →    completes it
(Pending)          (Approved)        vehicle           (In Progress)     (Completed)
                        ↓
                or rejects it (Rejected)

A transport manager can cancel the trip at any stage before it is completed (Cancelled).
```

Status	Meaning
Pending	Waiting for approval.
Approved	Approved. Logistics will assign a vehicle if it doesn't have one yet.
In Progress	The driver has started the trip.
Completed	The trip has finished.
Rejected	The request was turned down. The reason is shown on the trip page under **"Rejection Reason"**.
Cancelled	The trip was cancelled. The reason is shown on the trip page.

You get a bell notification when your trip is approved or rejected, when a vehicle is assigned, and if it is cancelled.

2.2 Request a trip

1. Click **"Request a Trip"** on your dashboard, or go to **Trips** and click **"Create Trip"**.
2. In **"Trip Details"**: - **"Vehicle"**: you can't choose one; Logistics assigns a vehicle after the request is approved. - **"Route (Optional)"**: choose a regular route if the trip follows one. - **"Trip Type"**: Inspection, Pick-up, Drop-off, Training, Complaints, CVV, Incident Inspection, Officials or Assigned. - **"Priority"**: Low, Medium (default), High or Urgent. - **"Requesting Department"**: **choose your department.** Your department head can only see and approve the request if this is filled in. - Optional: **"Team Number"**, **"Start Location"**, **"End Location"**, **"Remarks"**, **"Description"**, and tick **"Return Trip"** if you need to come back.
3. Optional cards: - **"Factories"**: the factories the trip will visit. - **"Headcount by Department"**: when a trip is shared, add each department and use **+ / −** to set how many seats it needs. - **"Logistics"**: the logistics unit(s) the trip is for.
4. In **"Schedule"**, enter the **"Date"**, **"Start Time"** and **"End Time"**. The end must be after the start.
5. In **"Passengers"**, add who is travelling: - Type in **"Add passengers..."** and pick people by name, or - choose a group in **"Add by group..."** to add everyone in it at once.
6. Add any **"Notes"**.
7. Click **"Create Trip"**.

The trip is created as **Pending** with a number like **TRP-20261028-0001**, and the approvers and your department head are notified. You return to the Trips list.

Repeating trips (one trip every day for a period)

1. In **"Schedule"**, tick **"Recurring Trip (Multiple Days)"**.
2. Enter the **"Start Date"** and **"End Date"** (the start can't be in the past).
3. Enter the **"Daily Start Time"** and **"Daily End Time"**.
4. Optionally give it a **"Group Name"**, e.g. *Daily Office Transport January 2026*.
5. Check the note **"N trips will be created"** and click **"Create N Trips"**.

VEMS creates **one separate trip for every calendar day** in the range, **including weekends**, and each needs approval. Keep the range to the days you actually need.

2.3 Follow your trips

1. Go to **Trips**. You see trips you requested, trips you ride on as a passenger, and (for department heads) your department's trips.
2. Use the search box (trip number, details, start or end location, vehicle registration or requester name) and **"Filters"** (Status, Priority, Schedule Type, Trip Type, Zone).
3. Click the eye icon on a row to open the trip page. It shows the schedule, passengers, the vehicle and driver (once assigned: **"Awaiting vehicle"** until then), and the trip's history.

Need to change or cancel your request? Employees can't edit or cancel a trip themselves. Contact your transport manager (Logistics); they can edit a Pending or Approved trip, or cancel it.

2.4 Give feedback or make a complaint about a trip

You can only give feedback on a trip you requested, rode on, or drove.

1. Click **"Submit Feedback/Complaint"** on your dashboard, or go to **Feedback & Complaints** and click **"Submit New"**. (You can also use **"Submit Feedback / Complaint"** on the trip page.)
2. Fill in **"Submit Feedback or Complaint"**: - **"Trip"**: the trip it is about. - **"Type"**: **Feedback** or **Complaint**. - **"Category"**: Driver Behavior, Vehicle Condition, Punctuality, Safety, Route or Other. - **"Subject"** and **"Description"**. - For **Feedback**: optional **"Driver Rating"** and **"Vehicle Rating"** (1–5 stars). - For a **Complaint**: **"Priority"** (Low, Medium, High, Critical), and tick **"Keep my identity hidden from the driver"** if you wish (your name then shows as "Anonymous").
3. Click **"Submit Feedback"** or **"Submit Complaint"**.

A complaint is sent to the complaint handlers. Follow it under **Feedback & Complaints**; its status moves from **Open** → **In Review** → **Resolved** → **Closed**.

2.5 Record your attendance

Your attendance card is on your **Dashboard** and on the **Attendance** page (Operations → **Attendance**).

1. When you start work, click **"Check In"**.
2. When you take a break, click **"Start Break"**; when you return, click **"End Break"**.

3. When you finish, click **"Check Out"**. In the dialog you can add a **"Factory visited (optional)"** and a **"Location name (optional)"**, then click **"Confirm Check Out"**.

Good to know: - Your browser asks for your **location**. Allow it so the location is recorded. If you refuse, the action still works, without a location. - You can check in **once per day**. If you check out while on a break, the break is ended for you. - If you are a passenger on a trip that is **In Progress**, checking in also marks you as boarded and checking out marks you as dropped off. - A check-in far (over 300 m) from any known factory or stop is flagged for review; it is still recorded. - Work over 8 hours a day is counted as overtime. - The **Attendance** page also shows your **"Recent history"** (last 30 days) and **"Today's event trail"**. If something is wrong, ask an administrator to correct it.

Part 3 — Approving trips (department heads)

As a department head you can approve or reject trip requests whose **"Requesting Department"** is a department you head. (An administrator sets the head on each department; see 7.3.)

You get a bell notification for each new request from your department, and a daily reminder for requests that are past their date and still pending.

3.1 Approve or reject one trip

1. Go to **Trips**. Your department's trips are listed with your own.
2. Open the trip (eye icon).
3. In the **"Actions"** card: - Click **"Approve Trip"**, then **"Approve"** to confirm, or - click **"Reject Trip"**, type the **"Reason"** (the requester will see it), and click **"Reject"**.

You can also use the ⋮ menu on the trip's row in the list: **"Approve Trip"** or **"Reject Trip"** (enter the **"Rejection reason"**).

3.2 Approve several trips at once

1. On **Trips**, tick the boxes of the Pending trips you want to approve (boxes appear only on trips you may approve).
2. Click **"Approve Selected"** in the bar that appears.
3. Click **"Approve N Trip(s)"** to confirm.

Up to 100 trips can be approved at once. This is handy for recurring trips.

After approval, the requester is notified, and Logistics is told the trip needs a vehicle.

Part 4 — Driving trips (drivers)

4.1 Your dashboard and trips

- **"Today's Trips"** on your dashboard lists the trips assigned to your vehicle today, plus upcoming ones. Click **"View My Trips"** for all of them.
- You get a notification **"You are driving trip … on …"** when a trip is assigned to your vehicle, and if it is cancelled.
- A banner warns you when your **driving licence** is missing, expiring soon or expired. You also get licence reminders in the bell. Tell your transport manager when you renew it.

You see the trips of the vehicle you are assigned to. If a trip is missing, check with your transport manager that you are set as that vehicle's driver.

4.2 Start a trip

1. Open the trip from your dashboard or the **Trips** list (eye icon).
2. Click **"Start Trip"**. (The trip must be **Approved** and have a vehicle.)
3. Enter the **"Odometer start (optional)"** reading, or leave it empty to add it later.
4. Click **"Start Trip"**. The trip is now **In Progress**.

The reading can't be lower than the vehicle's last recorded reading.

> Use the trip page to start and complete trips. The ⋮ menu on the Trips list may not show these options to drivers.

4.3 Check passengers in and out

On the trip page, the **"Passenger Attendance"** card lists each passenger with their planned pickup and drop-off and their actual check-in/out.

1. When a passenger gets in, click **"Check In"** next to their name.
2. When they get out, click **"Check Out"**.
3. If they don't turn up, click **"No Show"**.
4. In the dialog, check the **"Event time"** and **"Stop"**. You can add an **"Area or landmark"** and, if you know them, the **"Latitude"** and **"Longitude"**. Click **"Save Event"**.

A passenger must be checked in before they can be checked out. If you made a mistake, ask your transport manager to correct it (drivers can't correct events).

4.4 Complete a trip

1. On the trip page, click **"Complete Trip"**.
2. Fill in what you have (all optional): - **"Odometer end (optional)"**: not lower than the start reading, and not more than 3,000 km above it. - **"Fuel consumed"**, **"Fuel cost"**, **"Other costs"**, **"Notes"**.

3. Click **"Complete Trip"**. The trip is now **Completed**.

The distance is worked out from the two odometer readings. The trip page shows these figures in its **"Trip Figures"** card.

4.5 Your attendance

Use the attendance card on your dashboard, exactly as described in 2.5.

Part 5 — Running transport (transport managers)

Transport managers (also called **Logistics** in the app) approve trips, assign vehicles, run trips and look after the fleet.

5.1 Daily routine

1. Check the **bell**. Each morning you may get: - **"Trips need attention: ..."** (07:30): trips still pending approval after their date, approved trips never started, and trips in progress for over 24 hours. - Document and licence expiry reminders (07:00).
2. Approve or reject new requests (5.2).
3. Assign vehicles to approved trips (5.3).
4. Follow trips in progress and close them (5.4).
5. Handle new complaints (5.6).

5.2 Approve or reject trips

You can approve or reject **any** trip. The steps are the same as for department heads: see 3.1 and 3.2.

5.3 Assign or change a vehicle

You get a notification **"Trip ... is approved and needs a vehicle."** for each approved trip without one.

1. Open the trip.
2. In the **"Vehicle & Driver"** card, click **"Assign vehicle"** (or **"Change vehicle"** if one is already assigned).
3. Choose the **"Vehicle"**. The list shows each vehicle's current driver.
4. When **changing** a vehicle, choose a **"Reason"** (Replacement, Breakdown, Damaged, Maintenance or Other).
5. Add **"Notes"** if needed and click **"Assign"** (or **"Change"**).

VEMS refuses the vehicle if it is **already booked on an overlapping trip** or if it **has fewer seats than the named passengers**. The driver is the vehicle's current driver; the requester and the driver are both notified. Every change is kept in **"Vehicle Assignment History"** on the trip page.

> You can also pick a vehicle directly when *you* create a trip.

5.4 Start, complete, cancel and edit trips

Start and complete work as described for drivers in 4.2 and 4.4. A trip can't start without a vehicle.

Cancel a trip (any time before it is completed): 1. Open the trip and click **"Cancel Trip"**. 2. Choose the **"Cancellation reason"**: Passenger No-Show, Vehicle Breakdown, Driver Unavailable, Route Blocked, Weather Conditions, Emergency or Other. 3. Add **"Notes"** and click **"Cancel Trip"** (or **"Keep Trip"** to go back).

The requester and the driver are notified.

Cancel a whole recurring series: open any trip of the series and click **"Cancel Whole Series"**, then choose the reason as above and click **"Cancel Series"**. Every trip in the series that hasn't started is cancelled; trips in progress or finished are left alone.

Delete a trip (admins, only while **Pending**): open the trip, click **"Delete Trip"** and confirm. Cancel it instead if it has already been approved.

Edit a trip (only while **Pending** or **Approved**): 1. Open the trip and click **"Edit Trip"** (or the pencil icon in the list). 2. Change what you need. On this page you can also set each passenger's **"Pickup Stop"** and **"Dropoff Stop"** once a route is chosen. 3. Click **"Update Trip"**.

Note: editing an **Approved** trip does not send it back for approval. Passengers who already have check-in records can't be removed.

5.5 Passenger attendance and corrections

You can check passengers in and out exactly as drivers do (4.3). You can also **correct** mistakes:

1. On the trip page, scroll to **"Attendance Event History"**.
2. Click **"Correct Event"** on the wrong entry.
3. Choose the **"Replacement event type"** (Check In, Check Out or No Show), adjust the time and location, and enter a **"Correction reason"**.
4. Click **"Apply Correction"**.

The original entry is kept and marked **Voided**, so the history is never lost.

Passenger Events (Operations → **Passenger Events**) lists check-ins, check-outs and no-shows across all trips. Click **"Show"** to open the filters (Event Type, Validity, Source, Trip, dates, area), then **"Apply Filters"**. The **"Corrections"** card counts corrected entries; choose Event Type **"Correction"** to list them.

5.6 Handle feedback and complaints

New **complaints** (not plain feedback) in your zone trigger a notification.

1. Go to **Feedback & Complaints** and open the complaint.
2. Click **"Assign to Me"** so others know you are handling it. The status becomes **In Review**. *(Optional: you can also resolve it straight away.)*
3. Look into it. When it is sorted, enter the **"Resolution notes"** in the **"Resolve"** card and click **"Mark Resolved"**.
4. Then either: - click **"Confirm & Close"** to finish it, or - click **"Reopen"** if it needs more work.

To close an **Open** or **In Review** complaint that needs no action, click **"Close Without Resolving"**.

Use the **filters** button above the list to show only some types, statuses, priorities or categories.

5.7 Vehicles

Fleet → **Vehicles**.

Add a vehicle

1. Click **"Add Vehicle"**.
2. **"Vehicle Information"** (required fields marked *): - **"Brand"**, **"Model"**, **"Registration Number"** (must be unique), optional **"Color"**. - **"Vehicle Type"**: Sedan, SUV, Van, Microbus, Coaster, Bus, Pickup, Truck or Other. - **"Rental Type"**: Own (Company Owned), Pool (Shared Vehicle), Rental (Leased), Ad-hoc Rental or Support Vehicle. - **"Capacity (Seats)"**, **"Service Provider"** (the vendor), **"Driver"**, **"Zone"**, **"Active Status"**. - **"Condition"** (Available, Assigned, In Transit, Maintenance or Out of Service) and the regular **"Pick & Drop Route"** (optional). - The **"Driver"** must be active, available, have a valid licence and not already drive another vehicle (use **"Assign Driver"** to move a driver between vehicles). - For an **Ad-hoc Rental** whose details you don't know yet, you may leave brand, model, registration, provider and driver empty; VEMS fills in placeholders (registration **ADHOC-001**, ...) and marks it **"Details pending"**.
3. Optional sections: **"Parking Location"**, **"Vehicle Details"** (year, fuel, engine and chassis numbers).
4. **Documents**: for **"Documentation"** (tax token, fitness certificate), **"Insurance"**, **"Route Permit"** and **"Registration & Owner"**, enter the number, the **expiry date** and upload the file (JPG, PNG or PDF, up to 2 MB).
5. **"Alert Settings"**: **"Alert Days Before Expiry"** (default 30) and which documents to send alerts for.
6. Click **"Create Vehicle"**.

> **Keep expiry dates up to date.** Expiry badges, reminders and the Compliance report all rely on them. When a document is renewed, edit the vehicle and enter the new date and file.

View, edit and delete

- Click a row to open the vehicle page. A red box at the top lists documents that are expiring or expired; **"View file"** opens a document.
- Click **"Edit Vehicle"**, change what you need, and click **"Update Vehicle"**. Uploading a new file replaces the old one. Setting **"Condition"** to **Maintenance** or **Out of Service** starts a downtime from today (see below); setting it back ends it.
- To **activate or deactivate several vehicles**, tick them in the list and click **"Activate Selected"** or **"Deactivate Selected"**.
- **Delete** (admins only) is refused while the vehicle has open trips. Past trips and reports keep the deleted vehicle's details.

Assign a driver to a vehicle

1. Click **"Assign Driver"** on the vehicle page (or the assign icon in the list).
2. Choose the **"Driver"** (or **"— Unassign —"**) and click **"Save"**.

Only **active**, **available** drivers with a **valid licence** can be assigned. If the driver already drives another vehicle, VEMS says so: tick **"Confirm reassign"** and click **"Save"** again to move them. Every change is kept in **"Driver Assignment History"**.

Record downtime (vehicle out of service)

On the vehicle page, in the **"Downtime"** card: 1. Click **"Add downtime"**. 2. Enter **"From"** and, if it is already back, **"To"** (leave **"To"** empty while it is still out of service). 3. Choose the **"Reason"** (Repair, Accident, Servicing, Document renewal or Other), an optional **"Replacement vehicle"** and **"Notes"**. 4. Click **"Add"**.

When the vehicle is back, click **"End now"**. Downtime periods can't overlap. Downtime is used by the **Monthly Vehicle Report**; it does **not** stop the vehicle being picked for trips, so make sure you don't assign a vehicle that is in the workshop.

5.8 Drivers

Fleet → **Drivers**. The list shows each driver's vehicle, vendor and a licence badge: **Valid**, **Expiring Soon** (within 30 days), **Expired** or **No Expiry Set**.

Add a driver

1. Click **"Add Driver"**.
2. Fill in **"Full Name"**, optional **"Username"** (left blank, it is made from the email or name; see 7.1), and the zone access.
3. In **"Driver Information"**: **"Vendor"**, **"License Class"** (A Motorcycle, B Car/Light Vehicle, C Medium Vehicle, D Heavy Vehicle/Bus), **"Driving License Number"** and **"License Expiry Date"** are required. Upload the **"License Scan"** if you have it.
4. In **"Additional Details"**: **"Personal Phone"** and **"WhatsApp ID"** are required, and **"Status"**.
5. Enter a **"Password"** and **"Confirm Password"** and give them to the driver.
6. Click **"Create Driver"** (it becomes active once all required fields are filled).

Import many drivers from Excel

1. Click **"Import Drivers"**, then **"Download template"**.
2. Open the file. On the **"Drivers"** sheet, the **shaded headers are required**: **name, personal_phone, vendor, zone_code, driving_license_no, license_class, license_expiry_date**. The **"Instructions"** sheet explains every column; the **"Vendors"**, **"Zones"** and **"Departments"** sheets list the values you can use.
3. **Delete the example row**, then add one row per driver. Dates may be typed like **2030-01-14** or **14/01/2030**.
4. Save, then in **"Import Drivers"** choose the **"File"** and click **"Import"**.
5. Read the result: **"Imported N driver(s) successfully."**, or which rows were skipped and why (fix those rows and import just them again).

A licence number that is already in VEMS is skipped, so importing the same file twice doesn't create duplicates. Imported drivers get an unknown password: **set a password for each one** (Edit → **"New Password"**) before they log in.

Other driver tasks

- **Edit:** open the driver and click **"Edit Driver"**. Leave **"New Password"** empty to keep the current one.
- **Change status of several drivers:** tick them, click **"Change Driver Status"**, choose **"Driver Status"** (Available, On Trip, On Leave, Inactive, Suspended) and click **"Update N Driver(s)"**.

- **Assign a vehicle:** click **"Assign Vehicle"** on the driver page and pick the vehicle. If the vehicle already has a driver, tick **"Replace "** to confirm: that driver is taken off the vehicle.
- **Export:** use **"Export"** above the table.

5.9 Vendors (service providers)

Fleet → **Vendors**.

1. Click **"Add Vendor"**.
2. **"Basic Information"**: **"Service Provider Name"** and **"Status"** are required; zone, phone, email, website, address and description are optional.
3. **"Documents & Bank Details"** (optional): trade licence, TIN, BIN and tax return numbers with their files, and bank details.
4. **"Contact Persons"**: at least one person with a **"Name"**. Click **"Add Person"** for more and tick **"Primary contact"** on the main one.
5. Click **"Create Vendor"**.

Only **active** vendors can be chosen for vehicles and drivers. A vendor that still has vehicles can't be deleted.

5.10 Routes and stops

Fleet → **Routes**. A route is a named, ordered list of stops that trips can follow.

1. Click **"Create Route"**.
2. In **"Route Information"**, choose the **"Zone"** and enter the **"Route Name"** and **"Description"**.
3. In **"Route Stops"**, click **"Add Stop"** for each stop, then in **"Stop Location"**: - type to **search existing stops**, or - choose **"Create new stop"** and enter its name, or - click the **map icon** to pick it on the map: click a saved stop and **"Add to Route"**, or click **"Create New Stop"**, click the spot on the map, enter **"Stop Name"** and **"Address"**, and click **"Create Stop"**.
4. Optionally enter each stop's **"Arrival Time"** and **"Departure Time"**.
5. Put the stops in order with the arrow buttons (move up / down / to top / to bottom).
6. Click **"Create Route"**.

Distances between stops are calculated automatically from their map positions (straight-line, not road distance). Switch to **"Manual Distance"** to type real distances instead.

To **delete** a route, click the bin icon on its row and confirm. A route that trips have used can't be deleted (you'll see why); edit it instead.

5.11 Factories

Fleet → **Factories**. Factories are the places trips visit.

1. Click **"Add Factory"** and fill in **"Account ID"** (unique), **"Factory Name"**, **"Status"**, and optionally city, latitude/longitude, one-way mileage, address and zone.
2. Click **"Create Factory"**.

A deleted factory can be brought back: click **"Show deleted"**, then **"Restore"**.

Part 6 — Reports

The **Reports** section of the menu is available to transport managers, management and admins. Each report has filters at the top; set them and click **"Apply"** / **"Apply Filters"**. Export with **"Excel"**, **"PDF"** or the **"Export"** button where shown. Reports only include your zones.

Report	What it answers
Trip Report (page title "Reports Module")	How many trips, passengers and no-shows in a period; trends by day, status, route and schedule type; full trip history. Default: last 30 days.
Monthly Vehicle Report	For up to 31 days: vehicles used per day by purpose, trips by purpose, vehicles down (from downtime records), ad-hoc vehicles needed, by office, service quality and a vendor scorecard. **"Summary"** and **"Details"** tabs.
Complaints & SLA	Complaints in the period, how fast they were resolved, which are still open, and which are past their target (Critical 24 h, High 48 h, Medium 72 h, Low 120 h).
Driver Performance	Trips, completion, on-time starts, ratings and complaints per driver.
Compliance & Expiry	Vehicle documents (tax token, fitness, insurance, route permit) and driving licences that are expired or due within 30/60/90 days, as of today, plus records missing an expiry date.
Department Usage	Trips, shared-trip headcount, passengers, no-shows and kilometres per department.

Attendance Reports (Operations → **Attendance Reports**, management and admins) shows everyone's attendance: filter by **"User"**, dates, **"Source"** (how the check-in was made: Self Service, Biometric Device or Manual), **"Used Transport"** and **"Anomaly"**, and choose columns with **"Columns"**. The **"Driver"** column shows who drove the trip the person rode on. Admins can **"Export"** (CSV, Excel or PDF) what is on screen. Click the eye icon to see a day's events. Admins can **"Correct"** an event's time (a **"Reason"** is required; the original is kept).

Part 7 — Administration (admins)

7.1 Users

Administration → **Users**. This page lists every account except drivers: employees, transport managers (office staff with the **transport-manager** role) and admins. Drivers are managed under **Drivers** (5.8).

Add a user

1. Click **"Add User"**.
2. Fill in: - **"Full Name"** (required). - **"Username"** (optional). Left blank, VEMS makes one:
    - from the email: **rowshan.runa@rsc-bd.org** → **rowshan.runa**;
    - with no email, from the first and last name without titles (Md, Mr, Mrs, Ms, Miss, Dr, Engr, Prof): **Md. Shajahan Mia** → **shajahan.mia**;
    - if that is taken: **mdshajahan.mia**, then **shajahan.mia2**, **shajahan.mia3**, …
    - **"Employee ID"**, **"Email Address"**, **"Designation"**, **"Department"**.
    - **"Zone Access"** (required): **"All Zones"**, or one or more zones.
    - **"Roles"** (required): e.g. employee, department-head, management, transport-manager.
3. In **"Additional Details"**, **"Personal Phone"** and **"WhatsApp ID"** are required (even though they have no *), and **"Status"**. The rest is optional.
4. Enter a **"Password"** and **"Confirm Password"**.
5. Click **"Create User"** (it becomes active when the form reaches 100%).
6. Give the user their username and password.

> **Give every user an email address if you can.** Without one they can't use "Forgot password", and you will have to reset their password for them.

Import many users from Excel

1. Click **"Import Users"**, then **"Download template"**.
2. Fill in the **"Users"** sheet. Required: **name** and **zone_code** (one code, several separated by commas, or **ALL**). Optional: username (made automatically if blank), email, employee_id, designation, department_code, personal_phone, whatsapp_id, role (blank = employee) and status. The other sheets list valid department codes, zones and roles.
3. Delete the example row and save.
4. Choose the **"File"** and click **"Import"**. Read the result message; skipped rows say why.

Drivers and super-admins can't be imported here. Imported users get an unknown password: they use **"Forgot password"** (if they have an email), or you set one for them.

> Before re-importing a file, check the user list: rows with no email and no employee ID would be created again under a new username.

Edit a user or reset a password

1. Open the user and click **"Edit User"**.
2. Change details. To reset the password, fill in **"New Password"** and **"Confirm New Password"**; leave them empty to keep the current one.
3. Click **"Update User"**.

Only users allowed to manage roles can change roles, and only a super admin can give or remove the super-admin role.

Deactivate, activate, delete

- **Deactivate:** click the deactivate icon. **"Remove from all groups"** is ticked by default. Click **"Deactivate"**. The user is signed out and can't log in again until reactivated (they see "Your account is inactive").
- **Activate:** click the activate icon. **"Add back to the groups they were removed from"** is ticked by default. Click **"Activate"**.
- **Delete:** only possible for users with no trip history. Otherwise deactivate them instead.

To protect against lock-outs: - You can't deactivate or delete **your own** account (the icons don't show on your row). - Only a **super admin** can deactivate or delete a super admin. - A super admin can't remove their **own** super-admin role; another super admin has to. So there is always at least one super admin.

"Export" (above the table) downloads the non-driver accounts that match the current search and filters, as CSV, Excel or PDF.

7.2 User groups

Administration → **User Groups**. Groups let requesters add a whole team as trip passengers in one click (**"Add by group..."**).

1. Click **"Create Group"**, enter a unique **"Group Name"** and a **"Description"**.
2. Click **"Add Users"**, search, and select members. (Drivers can't be added.)
3. Click **"Create Group"**.

On a group's page, use **"Add Members"** or the remove icon. Only **Active** groups are offered on the trip form.

7.3 Departments

Administration → **Departments**.

1. Click **"Add Department"**. Enter **"Department Name"** and **"Department Code"** (up to 10 characters, unique), and optionally description, location, phone and email.
2. **"Department Head"**: choose the person who approves this department's trips. **Set a head for every department**, otherwise department trip requests can only be approved by transport managers.
3. Choose the **"Attendance Mode"**: **Biometric device** (office staff) or **Self-service** (field staff who check in in VEMS). See the note in 8.4.
4. Leave **"Active Department"** on and click **"Create Department"**.

"Export Departments" and **"Import Departments"** work with CSV/Excel (import columns: name, code, description, location, phone, email, is_active, attendance_mode). A department with users can't be deleted.

7.4 Zones

Administration → **Zones**. Click **"Add Zone"**, enter a **"Zone Name"** (e.g. Dhaka) and **"Zone Code"** (e.g. DHK, up to 10 characters), and click **"Create Zone"**. A zone can't be deleted while users, vehicles, stops, routes, factories, vendors or logistics still belong to it.

7.5 Logistics units

Fleet → **Logistics**. A logistics unit is a named team (e.g. *Fleet Management*) belonging to a department. Requesters can tag a trip with the unit(s) it is for.

1. Click **"Create Logistics"**, enter **"Name"**, **"Department"**, **"Status"** and an optional description and zone.
2. Use the lock icon to switch a unit between active and inactive. Only active units appear on the trip form.

7.6 Roles and permissions

Administration → **Roles**. A role is a set of permissions; each user has one or more roles.

Built-in role	In short
super-admin	Everything.
admin	Everything (operations and administration).
transport-manager	Trips (approve, assign vehicles, run, cancel), fleet, drivers, vendors, routes, factories, complaints, reports. Cannot delete records or manage users, roles or zones.
management	Read-only view of trips, fleet, complaints, reports and attendance reports; can request trips and submit complaints.
department-head	An employee who can also approve/reject their own departments' trips.
employee	Request trips, see own trips, submit feedback, own attendance.
driver	Run trips on their vehicle, check passengers in/out, own attendance.

- **Create a role:** click **"Create Role"**, enter the **"Role Name"**, leave **"Guard Name"** on **Web**, tick permissions (they are grouped by area, such as Trips, Vehicles and Users; use **"Search permissions..."**, **"Select All"** / **"Deselect All"**), and save.
- **Edit a role:** open it, change the ticked permissions, click **"Update Role"**.
- The 7 built-in roles can't be renamed or deleted, and a role that still has users can't be deleted.

> Changing a built-in role's permissions here works, but those defaults are restored if a developer re-runs the setup command. Tell your developer about permission changes you want to keep.

7.7 Activity Log

Administration → **Activity Log** shows who did what: logins, and changes to users, roles, groups, departments, factories, logistics, routes, vehicles and vendors. Search, and filter by **"Area"**, **"Event"** and **"User"**. Entries are kept for a year.

Part 8 — Reference

8.1 Who can do what

Task	Employee	Dept. Head	Driver	Transport Mgr	Management	Admin
Request a trip	✓	✓		✓	✓	✓
See own trips	✓	✓	✓	✓	✓	✓
See all trips		own dept.		✓	✓	✓
Approve / reject trips		own dept.		✓		✓
Assign vehicles				✓		✓
Start / complete trips			own vehicle	✓		✓
Edit / cancel trips				✓		✓
Check passengers in/out			own vehicle	✓		✓
Correct passenger events				✓		✓
Submit feedback / complaints	✓	✓	✓		✓	✓
Handle complaints				✓	view	✓
Own attendance	✓	✓	✓	✓	✓	✓
Attendance reports					✓	✓
Vehicles, drivers, vendors, routes, factories			view vehicles	✓ (no delete)	view	✓
Reports				✓	✓	✓
Users, groups, departments, zones, roles, logistics, activity log						✓

8.2 What you get notified about

When	Who is notified
A trip is requested	Approvers in that zone, and the head of the requesting department
A trip is approved or rejected	The requester
An approved trip has no vehicle	Logistics (transport managers) in that zone

When	Who is notified
A vehicle is assigned to a trip	The requester and the vehicle's driver
A trip is cancelled	The requester and the driver
A complaint is submitted	Complaint handlers in that zone
A complaint is assigned to you	You
Daily, 07:00: vehicle documents or driving licences expiring	Transport managers/admins in that zone, and the driver for their own licence. Sent 30 days before (or the vehicle's alert days), 7 days, 1 day, on the day, then weekly once expired.
Daily, 07:30: trips needing attention	Approvers and Logistics, for trips overdue for approval, never started, or running over 24 hours

8.3 Common problems

Problem	What to do
A menu item or button described here is missing	Your role doesn't include it. Ask your administrator.
My department head can't approve my trip	Make sure **"Requesting Department"** was filled in on the trip, and that the department has a **"Department Head"** set.
I can't edit or cancel my own trip	Only transport managers can. Contact Logistics.
"Forgot password" email doesn't arrive	Check spam. If your account has no email, ask an administrator to set a new password.
A trip can't be started	It needs to be **Approved** and have a vehicle assigned.
"This vehicle is already booked on an overlapping trip"	Choose another vehicle, or change the trip's time.
"This vehicle seats X, but N passengers were selected"	Choose a bigger vehicle, or split the trip.
A driver can't be assigned to a vehicle	The driver must be active, **Available** and have a valid licence.
An import says some rows were skipped	The message lists the row numbers and reasons. Fix those rows and import only them again.
"Server error"	Try again once. If it repeats, tell your administrator what you did and when.

8.4 Known limitations

These are current gaps in VEMS. Work around them as described until they are fixed.

- **Attendance mode** (self-service / biometric) has no effect yet: everyone can use Check In / Check Out.

8.5 For administrators: server commands

These are run on the server by IT, not in the app.

Command	What it does
`php artisan vems:create-admin`	Creates the first super-admin on a new installation.
`php artisan permissions:update`	Adds new permissions and roles after an update. **Safe** on a live system: never removes anything.
`php artisan setup:permissions`	Resets all roles and permissions to the defaults and **deletes custom roles**. Do **not** run on a live system. `php artisan db:seed` does the same.
`php artisan vems:test-mail you@rsc-bd.org`	Sends a test email and shows the mail settings, to check password-reset emails work.
`php artisan vems:expiry-reminders`	Sends the document and licence reminders (runs daily at 07:00).
`php artisan vems:trips-needing-attention`	Sends the "trips need attention" summary (runs daily at 07:30).
`php artisan backup:run` / `backup:list`	Takes a backup now / lists backups (backups run nightly).

Scheduled jobs only run if the server's cron calls `php artisan schedule:run` every minute. See DEPLOYMENT.md.
